

Two things can happen when
an old wound finally meets
warmth.

Sandro Dalla Torre
@thesunchi

What you froze is still water,
and the body is water.

It was never meant to stay
solid.

Sandro Dalla Torre
@thesunchi

Stop feeding the freeze and
the thaw begins on its own.
No force required.

Sandro Dalla Torre
@thesunchi

Sometimes it's slow, like an ice cube melting because the room is simply warmer.

Sandro Dalla Torre
@thesunchi

Sometimes it bursts.
You meet it fully and it
shatters at once, and the held
energy floods back.

Sandro Dalla Torre
@thesunchi

Either way you don't make it happen.

You stop keeping it frozen,
and let warmth do what
warmth does.

Sandro Dalla Torre
@thesunchi

If this landed, save and share.
